#编译错误

下面介绍在 pnum run build 时常见留医部

#内存不够

如果出现以下错误

```
1 ...
2 [28697:0x148008000] 74923 ms: Mark-sweep 4047.7 (4138.8) -> 4035.1 (4142.3)
MB, 3481.2 / 0.0 ms (average mu = 0.109, current mu = 0.
3 031) allocation failure scavenge might not succeed
4 ...
5
```

然后执行以下命令

```
pnpm add increase-memory-limit
increase-memory-limit
```

然后修改tsconfig.json

```
1 {
2   "compilerOptions": {
3    ...
4    },
5    "include": [
6
7    ],
8    "exclude": ["node_modules", "dist"]
9 }
10
```

然后再执行编译, 再看具体错误

```
1 pnpm run build
2
```

#vueuse

如果果出现以下错误

```
onadvertisementreceived: (this: BluetoothDevice, ev: BluetoothAdvertisingEvent)
=> any;
```

首先安装类型声明

```
pnpm add @types/web-bluetooth
```

然后在 tsconfig.json中定义

```
"compilerOptions": {
    ...
"types": ["element-plus/global", "echarts", "lodash", "web-bluetooth"]
},
```

#type-fest

下面错误是因为没有安装 type-fest

```
1 Cannot find module 'type-fest' or its corresponding type declarations.
```

安装type-fest包即可

```
pnpm add type-fest
```

#element-plus

需要将vue-tsc升级到版本中,因为package.json中 "vue-tsc": "^0.29.8",所以需要先删除后再升级你也可以在 element-plus (opens new window)的package.json (opens new window)文件中查看他使用的版本

```
pnpm un vue-tsc
pnpm add -D vue-tsc
```

#tailwindcss

如果编译后tailwindcss优先级高于element-plus, 我们可以在 vue模板index.html内body标签前添加

```
1 link rel="stylesheet" href="//unpkg.com/element-plus/dist/index.css" />
```

#mockjs

出现类似以下错误

```
Could not find a declaration file for module 'mockjs'
```

请安装mockjs的类型声明

```
pnpm add -D @types/mockjs
```

#icon-park

如果编译后的 icon-pack 文件过大,那是你全局引入了 icon-pack,我们需要使用 unplugin-vue-components (opens new window)与unplugin-auto-import (opens new window)进行按需要引入

```
1 Components({
2   resolvers: [
3    ...
4    (componentName) => {
5     if (componentName.startsWith('Icon')) {
6       return { name: componentName.slice(4), from: '@icon-park/vue-next' }
7     }
8     },
9     ],
```

```
10 ...
11 }),
12 ...
```

如果添加配置报错需要升级 unplugin-vue-components (opens new window)与unplugin-auto-import(opens new window)

```
pnpm un unplugin-vue-components
pnpm un unplugin-auto-import
pnpm add -D unplugin-vue-components
pnpm add -D unplugin-auto-import
```

#dayjs

如果编译后出现以下错误,因为你可能使用了 dayjs的 isLeapYear 插件,不要使用即可

```
1 u is not a function dayjs
```
